EXPERIENCE

OPLOG, Ankara/Turkey as a *Part-Time Software Developer*

MAY 2018 - JUNE 2018

I was responsible at developing and maintaining the Generic Business Warehouse project, which is a web application used by managers in warehouses to enter data to it's related model designed by administrators.

Tech Stack: Bootstrap 4, AngularJS, Node.js, Express, Azure Tables

OPLOG, Ankara/Turkey as a *Software Developer Intern*

FEBRUARY 2018 - MAY 2018

I was responsible at developing and maintaining the Generic Business Warehouse project, which is a web application used by managers in warehouses to enter data to it's related model designed by administrators.

Tech Stack: Bootstrap 4, AngularJS, Node.js, Express, Azure Tables

Kale Yazılım, Ankara/Turkey as a *Test Engineer Intern*

JUNE 2017 (20 Work Days)

I worked as a Test Engineer Intern, responsible at testing various web applications using Ranorex. My responsibility was fixing the test suites that were not working. After I fixed the test suites, I started analyzing the test reports that had been generated by the test suites, to find bugs and problems on the web applications.

Tech Stack: C#, Ranorex

EDUCATION

Bilkent University, Ankara/Turkey, *Computer Technologies and Information Systems*

Helsinki Metropolia University of Applied Sciences, Helsinki/Finland, *Information Technologies*

August 2017 - December 2018

Erasmus+ Program, CGPA: 3.68, ECTS Completed: 31 ECTS

SKILLS

Web Development

HTML / CSS

Javascript

React

Node.js (Express)

AngularJS

PHP

Agile Development

GIT

SQL

Interests

Listening to music.

Reading books.

Theatre.

Playing guitar..

LANGUAGES

Turkish (Native),
English (Professional),
Spanish (Basic)

Exam Scores

Bilkent COPE (Grade: B)

PROJECTS

Freelance Web Development — *Freelance web designs for following companies/persons.*

- **Cafe Cafen** – http://cafecafen.com

  A simple but effective responsive web design for a local cafe located in Bodrum/Turkey. Using technologies like Bootstrap 4 and PHP.

- **AVTTDM Web Control Panel** – (Game server is closed.)

  I've designed an online user control panel, for a game server where you can:

  -View your personal information, stats.
  -Search for other users, view their stats.
  -Manage your additional settings.
  -Change your user settings.
  -Buy/Sell game items.
  -User Authentication, admin access.

Other IT Related Projects — *Other projects that I was a part of.*

- **Roommate Detector. (Internet of Things)**

  -Our motivation for this project was to tackle a real-life issue. When we were discussing for project idea, we realized that HOAS Houses had the issue of not knowing if your roommate is present in their room or not.

  -We wanted to solve this issue by creating a web application system, where you can check if your roommates are in their room or not. While creating the system we decided to add extra features such as; ability to see the rooms temperature, a "don't disturb" button, to notify your roommates that you don't want to be disturbed.

  – Project report is available at Linkedin profile.

- **AVTTDM Game Server – Owner**

  -Developed my own game server for San Andreas Multiplayer which had up to 500+ players per day. It was a simple method for me to learn how to code. Also managed a community for this game server with over 500+ members. Tracked bug reports, handled community issues, requests.

  Project does no longer exist. I've managed the project for two years.

Volunteer Work

Bahçelievler Rotaract Club, Ankara/Turkey, *Member*

October 2015 - June 2018

Bodrum Interact Club, Bodrum/Turkey, *Member*

October 2010 - May 2015
